

United 854 GAS-AWAY

Wastewater Control and Degassing Agent

What happens when H₂S gas is not controlled?

1. Foul odors caused by H₂S bring customer complaints.
2. The gas causes corrosion of metals, concrete and equipment, deteriorating systems and creating the need for costly repairs.
3. Serious gas build-up can even cause death.

Eliminate all three of these concerns. Use **United 854 GAS-AWAY** to take all of your problems with H₂S away.

GAS-AWAY will:

- Disperse completely in water with no residue or precipitate left behind.
- Provide flocculent properties.
- Breakdown and eliminate H₂S within 15 minutes.
- Catalyze the breakdown of wastes and help control grease build-up in addition to eliminating H₂S.

It is ideal for use in wastewater treatment plants, lagoons and drying beds and the Earth Smart® formulation means there are no environmental or safety hazards.
