

UNITED

LABORATORIES

United 890 SLUDGE SHARKS are a blend of bacteria with a 10 billion CFU per gram count. These bacteria consist of gram positive and gram negative bacterial strains selected for their ability to reduce the VOC's (volatile organic compounds) found in sludge at the bottom of lagoons and treatment ponds. **SLUDGE SHARKS** are unique in that they release a superior bacterial either onto or directly into the sludge. **SLUDGE SHARKS** feature a two-prong attack utilizing United's Inter-Core Technology®.

The innovative Inter-Core Technology® combines the staying power of proven block technology with the instant concentrated dosage of a granular active.

- The core of the **SLUDGE SHARKS** consists of 10 billion CFU/g count of a special bacterial blend that is released as a slug dose into the waste stream within minutes.
- The **SLUDGE SHARKS** block is a special blend of bacteria. The 10 billion CFU/g block is designed to release its bacteria over an extended time (4-10 weeks).

United 890 SLUDGE SHARKS are smaller blocks that can be easily thrown into those areas where sludge has built up or throughout the entire lagoon as needed. Each block can treat up to 1500 square feet.

- Earth Smart® certified, making them safer for both the environment and the users.
- Contain no hazardous material.
- Easy-to-use.
- Treat 1500 square feet per block.
- Reduce sludge 30 to 60% in 60 to 90 days.
- No acid, caustics or solvents.
- Have a shelf life of 2 years.
- Meets EPA Protocols 1664 and 1664A.

United 890 SLUDGE SHARKS will reduce the sludge levels in lagoon and pond systems delaying the need to dredge. This reduces the cost of dredging and reclaims treatment capacity.

DIRECTIONS FOR USE:

United 890 SLUDGE SHARKS are designed to be easily thrown into a lagoon system by hand, directly into the areas where a sludge build up has occurred. In large lagoons a small boat may be needed to help disperse the blocks. The Sharks should be spread out with 1 placed in each 1500 square foot area to be treated. Treat once every 3 months or as needed.

FIRST AID MEASURES:

IF IN EYES: Rinse thoroughly with plenty of water for at least 15 minutes, lifting lower and upper eyelids. Consult a physician.

IF ON SKIN: Wash immediately with plenty of water for at least 15 minutes.

IF INHALED: Remove to fresh air.

IF SWALLOWED: Clean mouth with water and drink afterwards plenty of water.
